

## Environmental policy company RAUCH

**A high quality level, the safety of our products and the efficient handling of natural resources are important basics for the long-term development of our company with regard to competition.**

**Therefore, the management of the company Rauch stipulates an environmental policy according to the methods and environmental impact of the activities, products and services.**

- The key to sustainable success on the market lies in the reliability of the organisation and the quality and safety of the products made with regard to natural resources. For us, economy and ecology are not contradictory.
- The executives and management of the organisation create and maintain a working environment in which the staff can concentrate on the achievement of the objectives and programs made with regard to environmental protection. In this way, the awareness of all staff members concerning the significance of a sustainable method of production can continually be improved.
- Through hygienic conditions, the allocation of modern production installations as well as systematic maintenance, the integration of environmental protection into the TQM system and the awareness in dealing with dangerous material, unnecessary impact on the natural environment shall be avoided. In this matter we strive to make continuous improvements which at least adequately allow for the fulfilment of statutory provisions as well as any other requirements and special legitimate requirements of interested parties such as abutting owners.
- We invest in the ongoing training and further education of our staff on all levels in order to increase the quality and safety of the processes and to adapt to the customers and to the environmental requirements.
- Through close relations with our business partners and suppliers we try to use the resources in an efficient way and to optimize processes, to avoid negative effects on the environment in an extensive way in order to aim for adding value together within a growing and innovative market and to optimize the use of environmental matrices.
- It is our goal to avoid mistakes in every field of the managerial value-added chain and to identify causes and weak points and eliminate detected faults consistently. A significant objective of the company is the realisation of continuous room for improvement and systematic cause analyses by means of appropriate quality tools.
- Environmental protection is created and developed through team spirit, the joint approach towards dealing with problems and the consistent implementation of solutions to problems occurring in the workplace.
- Through development and aiming for planned objectives within the operational environment protection it is our goal to prevent environmental impact and to exploit cost-cutting benefits. Resources shall be implemented in such a way that the highest benefit, ecologically and economically, may be expected.
